Guidelines on Care & Maintenance of the Huper Optik(R) Coated Windows

1. Do not clean the coated surface for at least 7 days for automotive applications. This is to ensure that the adhesive completely bonds to the windows.
2. Do not use alcohol / concentrated ammonia based solutions or abrasives to clean the coated windows. Use lukewarm water and wipe off lightly with a clean cloth.
3. Do not put on stickers or adhesive materials of any kind on the coating.
4. Do not pick at the edges of the coating. This will cause delaminating or peeling.
5. A little "misty look" may appear just after coating. This is normal and would vanish within 4 to 10 weeks. Similarly, tiny water bubbles (if any) would also disappear.
6. Thin splice lines may be visible on curved windows, which require 2 or more sections of coating for full coverage.
7. For automotive applications, do not switch on the rear defogger within the first week of installation.
